or two shillings*

CALCUTTA :
GOVERNMENT OF INDIA CENTRAL PRINTING OFFICE,
8, HASTINGS STREET

PREFACE

PREFATORY notes on the retail and wholesale prices of food-grains and staple articles have been prepared and prefixed respectively to Parts I and II of this issue of the volume.

A new table (No. 29), pages 150 and 151, shewing variations in the quinquennial prices of Kangni, has been added.

Retail prices are expressed in India generally, and in Part I of this volume, in terms of the number of sers sold for a unit of money, namely, one rupee. To assist in translating this expression into the amount in money paid for a unit of quantity, a table is prefixed to the volume stating the equivalent of "sers per rupee" in "annas per ser" (one anna being the sixteenth part of a rupee).

CONTENTS

PART I—RETAIL PRICES

Page

Table of Equivalents	v—viii
Note on retail prices	1—5
Average annual prices of Food-grains and Salt (1861—1905) :	

No.	Food-grain	Page	No.	Food-grain	Page
No. 1—	Rice (common)	4—15	No. 7—	Kangni or kakun	53—55
" 2—	Wheat	16—25	" 8—	Gram	56—65
" 3—	Barley	26—31	" 9—	Maize	66—71
" 4—	Jawar or cholum	32—39	" 10—	Arhar or thur	72—79
" 5—	Bajra or cumbu	40—47	" 11—	Salt	80—91
" 6—	Marua or ragi	48—51			

Quinquennial averages deduced from the figures in tables Nos. 1 to 11 :

No.	Food-grain	Page	No.	Food-grain	Page
No. 12—	Rice (common)	92—96	No. 18—	Kangni or kakun	112—115
" 13—	Wheat	97—100	" 19—	Gram	114—118
" 14—	Barley	101—102	" 20—	Maize	119—121
" 15—	Jawar or cholum	103—106	" 21—	Arhar or thur	122—125
" 16—	Bajra or cumbu	107—109	" 22—	Salt	126—130
" 17—	Marua or ragi	110—111			

Variations in the quinquennial averages in tables Nos. 12 to 22, the prices for 1871-75 being taken as 100 :

No.	Food-grain	Page	No.	Food-grain	Page
No. 23—	Rice (common)	131—135	No. 29—	Kangni or kakun	150—151
" 24—	Wheat	136—139	" 30—	Gram	152—155
" 25—	Barley	140—141	" 31—	Maize	156
" 26—	Jawar or cholum	142—144	" 32—	Arhar or thur	157—158
" 27—	Bajra or cumbu	145—147	" 33—	Salt	159—163
" 28—	Marua or ragi	148—149

PART I

RETAIL PRICES

NOTE

RETAIL PRICES OF FOOD-GRAINS

Prior to 1873 prices of food-grains were officially recorded in different provinces, but the statistics were not collected on any uniform plan, nor brought together in an accessible form.

Under orders of the Government of India issued in 1872 a fortnightly return of retail prices for the commoner food-grains and salt in each district was instituted, and these returns have been regularly published in the *Supplement* to the Gazette of India since 1873. In 1878 a small volume was published, giving yearly average prices for food-grains for the period 1861—1876 in certain districts which were selected as typical. In 1884 the figures in the earlier volumes were revised, prices for the period 1876—1883 were added and a new volume was published. Since that date a statement of the average prices of each year beginning from 1861 has been published annually in the volume entitled *Prices and Wages in India*. Throughout the period from 1872 additions to the record have been made from time to time by increasing the number of stations from which reports regarding certain grains were required, and also by adding one kind of grain "Kangni" to the list.

The following statement shows the grains for which prices are now recorded in each province and the year from which the record begins:—

Prices are expressed, according to the usual Indian method, in terms of the number of *seers*(b) sold for a rupee. It is advisable to note that not only do money prices vary inversely to quantity prices, but that the percentages of the rise or fall of prices according to the two methods of notation are

Method of expressing
prices in India.

(a) Price for Baluchistan only

(b) A ser is equal to 2'06lb nearly

quite different. Thus if the number of sers obtainable for a rupee is halved, *i.e.*, decreases by 50 per cent., the money price is doubled, *i.e.*, rises 100 per cent.; but, if the grain becomes cheaper, for example, if the quantity of sers sold for a rupee increases by 50 per cent, the corresponding money price is only 33 per cent lower.

Tables Nos. 1—11 shew the annual average prices of each of the ten commoner kinds of food-grains, and of salt. The prices quoted are the averages of the half-monthly prices reported during the year. The districts in each province are grouped together with reference to their climatic character and rainfall, and averages are struck for each group as well as for each province.

Tables 12—22 give average prices for each of the food grains dealt with in the previous tables and for salt in each quinquennium since 1861.

Tables Nos. 23—33 show the variations in the quinquennial average prices taking the average prices of the quinquennium 1871—75 as 100. This period was selected as the standard, because the character of the seasons was generally normal, and its middle year 1873 marks the beginning of the great change in the relative value of gold and silver. These variations represent the relative changes in money prices and are in inverse ratio to the quantity prices. For Kangni the average price of the quinquennium 1886—90 is taken as 100, as the record of prices does not go further back than 1886.

Table No. 34 shews the annual average prices of the most important food-grains at twenty-three stations, which have been selected with a view to giving a fair indication of the general level of prices throughout each province.

Table No. 35 shews the variations of these prices, the prices of the year 1873 being taken as 100.

A general rise of prices took place about 1860. With the suppression of the Mutiny and the transfer of the administration to the crown, there commenced a new era of commercial and industrial activity. The resources of the country were developed by the construction of roads and railways, the improvement of harbours, and the extension of irrigation. The cotton famine caused by the American War of Secession (1861—65) gave a great impetus to the cultivation of cotton in India, which, while the war lasted, brought large profits to the cultivator and the merchant. The influx of the precious metals which began about the time of the Mutiny was thus still further stimulated, and a great rise of prices ensued from about the second year of the war throughout the cotton-growing districts of Western and Central India, extending in a smaller degree to other parts of the country. Prices were also raised by the famine of 1861 in the Upper Doab of the province of Agra and the neighbouring districts of the Panjab and Rajputana and by the scarcity of Cutch.

On the collapse of the inflation caused by the American war, prices would have fallen but for the great famine of 1866 in Orissa, which extended into Bengal proper, Bihar, Madras, and the eastern part of the Central Provinces. Another notable famine—that of 1869—affected Western Rajputana and parts of Northern India and the extension of scarcity, West and South, produced a rise of prices in Bombay, the Central Provinces, and Hyderabad.

During 1871—75 prices were not seriously disturbed by any calamity except the scarcity in Bihar of 1874, and although large purchases of grain were then made by the Government and the scarcity prevailed in the adjoining districts of the United Provinces, the disturbance of prices was not widely felt. The export trade in rice, which expanded greatly in 1872-73, was on a large scale throughout the decade 1871—80, and showed greater contraction in 1874, the year of the Bihar famine, than in the Deccan famine three years later.

In this quinquennium occurred the great famine of 1877-78 which affected an enormous tract in Western and Southern India and extended with diminished intensity into the North, causing a general rise of prices of food-grains all over India. The export trade in wheat, which had begun in a small way after the opening of the Suez Canal in 1870, received a check in the years 1878—1880.

Speaking generally, all crops except rice were good or abundant during these years, though there was scarcity in a portion of the Panjab in 1884 and distress in parts of Bengal and Madras in 1885. The rice crop was bad between 1883 and 1885 owing to drought and floods, but wheat was plentiful, and the average price for all grains was low.

It is difficult to find adequate reasons for the great rise in prices which took place during these five years, for the 1889 famine in Ganjame (accompanied by distress in the Orissa States and scarcity in Bihar) was only of local importance, and prices had already reached their highest point in 1888. The export trade in food-grains was not larger than in the preceding quinquennium.

The high prices ruling during 1886—90 were still further raised in 1891—92 by prolonged drought, causing scarcity and distress in Madras, the Bombay Deccan, Bihar, and Upper Burma. A strong Indian demand for rice was coupled with large exports, and at the same time there was an unprecedented export of wheat owing to the failure of crops in Europe, so that Indian prices rose almost to famine levels. With better seasons prices fell, but the lowest point reached in 1891—95 was still above the average level of the previous quinquennium, and, as in that period, the importation of silver for coinage, was on a large scale until the closure of the mints in June 1893.

This quinquennium includes two periods of intense and widespread famine. The failure of the crops caused famine over a very large part of India in 1896—97, and the Central and Western regions were again desolated by the famine of 1899—1900. The effect was to raise the prices of food-grains in all parts of the country to the highest levels on record. Wheat exports were reduced to insignificant proportions during the first famine; but in spite of the large supplies of rice absorbed by the affected areas, a very extensive export trade in rice was maintained, and in 1898—99 the exports of rice, wheat and other food-grains were larger than in any previous year except 1891—92.

The general character of the seasons in this quinquennium was good, and prices as a whole fell steadily. Rice, however, was an exception. The average price was actually higher in Burma and parts of Bengal and the United Provinces than in any previous quinquennium and even in the rest of India the fall was but slight. Advances in the price of Jute led to the substitution of Jute cultivation for rice in parts of Eastern Bengal, so that in the last year of the quinquennium, although there was nothing like a serious failure of crops, an unfavourable season sufficed to send the retail prices in Eastern Bengal up to famine levels by the end of the year 1905. The average area under rice in Lower Burma which supplies the greater part of the export crop was 14 per cent larger than the area under rice from 1856 to 1900, but the demand from foreign markets continued unabated and prevented any decline in prices. Wheat became cheaper all over India, and in most places, except in the Panjab and Central India, the average was little, if any, higher than in the period 1891—95. But in this case also the large demand for exports tended to keep the prices up. The prices of other food-grains except Arhar shew a great decrease, and the average of 1901—05 was generally below the average of 1891—95.

Generally speaking, the fluctuations in the retail prices of salt are the direct consequence of changes in the duty levied by Government. From 1861 to 1878 there was no change in most provinces. In 1878 the duty was reduced from Rs 4-0 a maund in Bengal to Rs 2-14-0, and the duty on Rajputana salt from Rs 3-0-0 to Rs 2-8-0. This change reduced the retail prices of salt in Bengal, United Provinces, Panjab and Assam; but about the same time the duty levied on salt in Sind was raised from Rs 0-8-0 to Rs 2-8-0 and in Bombay from Rs 1-13-0 to Rs 2-8-0, so that prices rose very largely in Sind and considerably in Bombay. Since 1878 the retail prices of salt all over India except Burma have uniformly responded to changes in duty. In 1882 the rate of duty was reduced generally to Rs 2 per maund which was raised again to Rs 2-8-0 in 1888. The reductions to Rs 2 again in 1903 and to Rs 1-8-0 in 1905 had an immediate effect in bringing down retail prices. In Burma the salt revenue system is somewhat different. In the years 1888, 1889 and 1890 increases in the rates of composition duty were made with a view to raising the incidence of the tax to the same level as in India, and the prices rose considerably in those three years. Since 1890 there has been little change in the retail prices.

PART II

WHOLESALE PRICES

The tables in this part of the volume contain figures of the wholesale prices of some of the principal staples of the imports and exports, the wholesale prices of food-grains and other articles in Indian markets and the price paid by the Supply and Transport Corps for articles for the consumption of troops in India.

Table No. 35.—Staple articles of Imports.—The following statement shows the articles for which prices are quoted in this table, the ports from which the prices are obtained and the year from which the record begins :—

	CALCUTTA.	BOMBAY.
Coal	1865
Copper	1843	...
COTTON GOODS—		
Grey shirtings	1843	...
„ yarn	„	...
Mule twist
Orange	„	...
Turkey red	„	...
Gold	1859	...
Iron	1843	...
Kerosene	1888	...
Silk, raw	1861
Speltet	1843	...
Sugar, beet	1892	...
Mauritius	1870

The average price of bar silver in London as quoted daily by the Bank of Bengal is also given in this table.

The articles though few in number represent in their aggregate value a large share of the total import trade. On the average of the last three years the imports of cotton-goods (yarns and manufactures), of metal and of sugar represent 56 per cent of the whole imports into India. In consequence of the development of the Indian coal-fields, foreign coal is no longer a considerable item in the import trade; and the rapid increase in the imports of kerosine oil, which began about 1888 has been checked by the competition of oil produced in Burma. The prices quoted from 1843—1858 are taken from the Exchange Price Current. From 1859 onwards the quotations are taken for Calcutta from the Price Current and Market Report of

the Bengal Chamber of Commerce. The price of coal at Bombay is taken from the Bombay Market Report and of gold from the Calcutta Price Current and Money Market Report and the prices of sugar, Mauritius and silk are reported monthly by the Commissioner of Customs, Bombay. The prices quoted are those for the first week of January and July in each year, or where quotations are not available for these weeks for the nearest period.

Table No. 37.—This table shows the variations in the prices quoted in table No. 36, taking the prices of the year 1873 as 100. In the case of articles for which the record of prices began in a year later than 1873 the price of the first year for which quotations are given is taken as 100.

Table No. 38.—Staple articles of Export.—The following statement shows the articles for which prices are quoted, the ports from which the quotations are made and the dates from which the record begins :—

	CALCUTTA	BOMBAY.	KARACHI.	MADRAS.	RANGOON
Castor oil	1859
Coal	1899
Cotton raw	1861
„ yarn	1874
„ T. cloth	„
Hides, buffalo	1843
„ cow	„
Indigo	1843
Jute, raw	1844
„ gunny bags	1859
„ Hessian cloth	1876
Lac	1843
Opium	„	1859
Rice	„	1870
Saltpetre	„
Seeds, linseed	1843	1861
„ Rape	1859
Sesamum (<i>til</i> or <i>jinjili</i>)	„
„ Poppy	„
Silk, raw	1843
Skins	1866	...
Sugar, date	„
„ cane	1873	...
Tea	1871	„	...
Wheat	1859	1867
Wool	1861	1870

Up to 1858 the prices quoted are taken from the Exchange Price Current. From 1859 onwards the source of the quotations is as follows :—

Calcutta :—The Price Current and Money Market Report of the Bengal Chamber of Commerce.

Bombay :—Current quotations of the Chamber of Commerce, Bombay Market Report and Trade Journal published in connection with the *Times of India*, the Current quotations of the Mill-owners' Association for the price of yarn and T. cloth, and a Monthly Report from the Commissioner of Customs for the price of wheat.

Karachi :—Price Current and Market Report of the Karachi Chamber of Commerce.

Madras :—Price Current and Market Report of the Madras Chamber of Commerce.

Rangoon :—Monthly Report from the Chief Collector of Customs.

The price of opium is obtained from the Finance Department.

The number of articles in this list is very much larger than the number of articles in the import list and their aggregate value represents 64 per cent of the total value of exports from India in the last three years.

The prices quoted are those obtaining in the first week of January and July in each year with a few exceptions which are mentioned in foot-notes below the tables.

Table No. 39.—This states the variations of the prices in table No. 38, the price of 1873 (in most cases the price in March) being taken as 100. In the case of articles added to the list after 1873, the price of the first year for which quotations are given is taken as 100.

Tables Nos. 40 and 41.—*Comparison of the average prices in India and London of staple trade commodities, and variations in the prices.*—Table No. 40 was prepared with figures from 1870 for the consideration of the Royal Commission appointed in 1886 to enquire into the changes in the relative values of gold and silver. It was published for the first time in the volume of Prices and Wages in 1890.

In 1898 prices of Burma rice were substituted for prices of Bengal rice. No other change has been made in the form of the table.

The London prices are the annual averages of weekly quotations given in the *Economist*. The Indian prices quoted are all Calcutta prices except those of cotton and rice. They represent the average of weekly quotations given in the Calcutta Price Current, which is published by the Bengal Chamber of Commerce. The price of cotton is taken from the Current Quotations of the Bombay Chamber of Commerce. The price quoted for Rangoon (Ngatsain and Ngakyounk) rice is the average of the prices reported in a special monthly return which is received from the Chief Collector of Customs, Rangoon.

Tables Nos. 42 to 44.—*Average prices in London of sixteen principal staples of trade and of bar silver, and variations.*—Table No. 42 was prepared in 1885 for the Royal Commission mentioned above. It was reproduced in the volume of Prices and Wages in India in 1890, with the addition of two descriptions of cotton, namely (1) Cotton, raw, Dhollera, mid, fair, and (2) cotton, upland, mid, fair. In 1899, the following additions and alterations were made :—

1. Coffee (Ceylon) was changed to coffee (East India plantation).
2. Indigo (Bengal), Jute, Linseed (Bombay), Rapeseed (Calcutta), Rice (Bengal), silk (surdah), cotton—raw (Dhollera) and shell-lac were omitted—as London prices for all these articles, except shell-lac are shown in table No. 40.
3. Coals—Helton Wallsend, Beef—inferior and bar silver were added.
4. A new table (table No. 43) shewing variations in the prices in table No. 42 was added.

The following changes in the tables were made in 1900 :—

1. Iron—Scotch pig, flour, leather, and butter were added.
2. Another new table (No. 44) shewing variations in the prices measured in silver was added.

The prices in table No. 42 are the annual averages of prices reported in the monthly Trade Supplement to the *Economist*.

The system on which table No. 44 is compiled is fully explained in a foot-note printed below the table.

Table No. 45.—Annual wholesale prices of food-grains and other articles.—Since 1897, wholesale prices of food-grains and certain other articles have been reported for selected marts in each province of India under orders issued by the Government of India in 1896. The following is a list of the articles for which fortnightly wholesale prices are reported, and the provinces from which reports are received. The number shown under each province indicates the number of marts in that province from which wholesale prices for the article in question are reported.

Name of articles.	Burma.	Eastern Bengal and Assam.	Bengal.	United Provinces.	Rajputana.	Panjab.	Balu-chistan.	Sind.	Bombay.	Berar.	Central Provinces.	Madras.	Mysore.

The prices* are those governing actual wholesale transactions on the last day of each fortnight, and unless wholesale transactions have actually taken place, no prices are quoted. The definition adopted for a "wholesale transaction" is one in which not less than 10 maunds of food-grains, seeds, grass and straw, and one maund of other articles, such as turmeric, tobacco, etc., change hands. In the case of live-stock, prices are quoted for a score of sheep and for a pair of bullocks. The prices are only quoted for those marts where the article in question is a staple of local trade. The total number of articles for which wholesale prices are reported as given in the list above is 45 and there are 95 separate marts from which reports are received. Prices for 24 of these articles are published in the Supplement to the Gazette of India each fortnight. Table No. 44 contains prices for the following 23 articles.

Rice (husked)	Gram	Sugar, refined
Wheat	Arhar	Cotton
Flour (wheat)	Linseed	Jute
Barley	Mustard and rapeseed	Tobacco leaf
Jawar	Poppy seed	Turmeric
Bajra	Sesamum (<i>til</i> or <i>jinjili</i>)	Sheep
Ragi	Ghi	Plough bullocks
Maize	Sugar, raw (<i>gur</i>)	

The prices given are the simple average of the half-monthly prices quoted from each reporting district.

Tables Nos. 46 and 47.—Wholesale prices of certain staple articles in Calcutta, and variations.—A special statement of the prices of certain staple articles in Calcutta was obtained in 1885 in connection with enquiries into the fluctuations in prices. It was incorporated in the 10th issue of Prices and Wages in India in 1893. No change has been made in the form of the table except that the prices of 2nd and 3rd class bricks, which were quoted up to 1901, have been omitted since that year. The sources from which prices for this table are taken, are stated in the note prefixed to the table.

Tables Nos. 48 and 49.—Annual average prices per 100 lb. paid by the Supply and Transport Corps, Punjab and Bengal Commands, for articles for consumption by troops, and variations.—These statistics were first prepared in 1885 in connection with the enquiry into the fluctuations in prices. They were incorporated in the tenth issue of the volume of Prices and Wages (1895) together with a table of variations. These tables have continued unaltered up to the present date.

NOTE.—In this table, the variations in the prices of gold (measured in silver) are arrived at by multiplying the price of bar silver^o in London in 1873 (=59½ d.) by 100 and dividing the product by the price of bar silver in the particular year.

Example—

Price of silver in 1899=27½ d. (table No. 41); price of silver in 1873=59½ d.; price of gold in 1873=100. The variation in the price of gold in 1899 is then worked out thus—
 $27\frac{1}{2} : 59\frac{1}{2} :: 100 : 215$

The variations in the prices of the other articles in this table are calculated thus: As the variation in the price of gold in table No. 42 is to the variation in the price of gold in this table, so is the variation in the price of the article in table No. 42 to the variation required.

Example—

Variation in the price of gold in table No. 42=100; variation in the price of gold (measured in silver) in 1899, in this table=215
 variation in the price of copper (measured in gold) in 1899=86 (table No. 42). Therefore
 $100 : 215 :: 86 : 185$

No. 45—AVERAGE ANNUAL WHOLESALE PRICES of FOOD-GRAINS and OTHER ARTICLES—
(Prices are stated in rupees and decimals of a rupee per ten maunds for all articles except Live-Stock)

RICE (husked)

NOTES—(1) Where no rates are given, there were no quotations in the price-current

(2) The prices entered are not all stated on the same basis. They represent in some cases contract rates, in others averages of price-current and contract rates, or averages of price-current and fixed rates, or averages of contract and fixed rates, or average of contract, price-current, and fixed rates, or again averages of price-current rates

PART III

WAGES NOTE

The statistics of wages presented in table 50, and its subsidiary tables 51 and 52, are compiled from half-yearly returns purporting to show for each district the average for the preceding six months of the wages per month of certain labourers and artizans. By far the most important class of labour is agricultural, and the record obtained entirely fails to give a reliable indication of the remuneration of the labourers. This result is due to the inherent difficulties of the problem, and the practical impossibility of getting the untrained reporting agency to make the necessary allowances for the varying conditions of employment. Payment in kind is commonly practised, either for the entire wage, or as a supplement to cash wages, and the supplements vary according to the season and the nature of the employment. The regularity of employment also varies greatly, and employment is practically nowhere continuous throughout the year. The most common expedient for avoiding these, and other difficulties, is to return cash wages for labourers employed in towns or their neighbourhood, which are in no way typical of the rates prevailing throughout the district. The same difficulties are also encountered in collecting information as to the wages earned by village artizans, and the results are further vitiated by assuming that masons, carpenters, and blacksmiths necessarily earn the same wages. The wages of horse-keepers are recorded with the least inaccuracy, but even if they are taken as typical of the wages of domestic service generally, the class represented is unimportant.

The selection of the districts, for which figures are published in the tables, is also faulty, as the districts are not typical of tracts having similar economic conditions, but are those originally selected according to their climatic character and rainfall for making returns of the prices of food-grains.

Measures are now being taken to replace the present faulty returns by more scientific methods of investigation, whose object will be to ascertain the standard rates of wages in each district or homogeneous tract, and to observe permanent changes in those standard rates as distinct from short period fluctuations.

Tables Nos. 53 and 54 are a record of wages paid in certain State Railways and Government Establishments as well as in some Industrial Establishments in various parts of the country.

(11)—Monthly wages (in Rs) in another Mill in Northern India

(a) Unskilled labour (in one of the Departments)

Years	Rate of Wage	Years	Rate of Wage	Years	Rate of Wage
1877	4'75	1887	5'18	1897	4'87
1878	4'11	1888	5'14	1898	4'87
1879	4'26	1889	5'2	1899	5'69
1880	4'2	1890	5'25	1900	5'69
1881	4'54	1891	5'64	1901	5'69
1882	4'7	1892	4'87	1902	5'69
1883	4'94	1893	4'87	1903	6'09
1884	4'82	1894	5'52	1904	6'09
1885	4'92	1895	4'87	1905	6'09
1886	5'21	1896	4'87	1906	6'09

The manager of the mill explains:

"The rate for 1877 appears to be abnormal, probably because there were few employes and the mill had only recently started. If the wages of one or two men more highly paid than the others be left out, the rate is Rs 4-3."

(ii)—Monthly wages (in Rs) in another

(b) Skilled labour (in January of each year)
